Azure Migrate – Replication (ASR)

- Flexible and powerful tool for Site Recovery (DR)
- Supports Replication to Azure within Azure Regions and from On-Premise (VMWare, Hyper-V, Physical).
- Can be used as Migration tool due to the powerful replication capabilities
- Built-in Migration testing to ensure expected results
- Warm Migrations with no long outages
- Advanced Monitoring and Analytics enables you to manage Performance and Utilization
- Built into Azure Migrate*

The screenshot displays the Azure Site Recovery console interface. At the top, there's a navigation bar with icons for Failover, Test Failover, Cleanup test failover, Commit, Resynchronize, Change recovery point, and a More menu. Below this is the 'Essentials' section, which is divided into two main areas: 'Health and status' and 'Failover readiness'. The 'Health and status' section shows 'Replication Health' as 'Healthy' (green checkmark), 'Status' as 'Protected', and 'Current RPO' as '5 mins [As on 4/26/2019, 3:12:09 PM]'. The 'Failover readiness' section shows 'Last successful Test Failover' as 'Never performed successfully' (yellow warning triangle), 'Configuration issues' as 'No issues' (green checkmark), and 'Agent version' as '9.24.1.0' (green checkmark). To the right of the 'Failover readiness' section is a box titled 'Latest recovery points' with the text 'Click above to see the latest recovery points.' Below the 'Essentials' section are two tabs: 'Errors(0)' and 'Events - Last 72 hours(1)'. The 'Errors(0)' tab shows 'No errors', and the 'Events - Last 72 hours(1)' tab shows 'No events'. At the bottom of the screenshot is the 'Infrastructure view' section, which has a 'view' button and a 'Diagram' button. Below these buttons is a table with two columns: 'CONNECTION' and 'HEALTH'.

Demo

Let's see in Action...

Azure Migrate – Demo

- Consider a simple application which is hosted on VMWARE (On-Prem) as follows.
 - VM1 (Application) – Windows Server 2012 R2 (IIS 8.x)
 - VM2 (Database) – Windows Server 2012 R2 (SQL Server 2012 R2)
- Create Azure Migrate Project and Perform Discovery and Assessment
- Analyze Dependency Mappings
- Migrate Virtual Machines to Azure using ASR

Azure Migrate - Limitations

- Assess only on-premises VMware Virtual Machines managed by V-Center(version 5.5,6.0,6.5 or 6.7)
- Support for Hyper-V is in preview with production support (using VHD's we can create VM's)
- Assessing Physical servers – Partner tools

Thank you
